PROFESSIONAL SUMMARY

Senior Software Engineer with 3+ years of experience building high-throughput payment APIs, distributed backend systems, and AI-powered developer platforms in regulated environments. Strong in Java/Spring Boot, production reliability, MCP-based agents, RAG, and CI/CD automation.

EDUCATION

The University of Texas at Austin | B.S. Electrical and Computer Engineering | May 2023

EXPERIENCE

Visa | Austin, TX

Senior Software Engineer (June 2026 - Present)

Software Engineer (June 2023 - June 2026)

- Owned architecture and launch of Visa's external-facing bulk requisition API, defining the client contract, request validation, bulk-processing lifecycle, and error semantics for a publicly documented Visa Developer Platform service.
- Designed and operated Java/Spring Boot services processing millions of production transactions with 99.999% availability, sub-second responses, and 500 TPS peak throughput across client testing, releases, operational readiness, and incident resolution.
- Led team-wide adoption of a LangGraph- and Claude-based chaos engineering platform that generates failure scenarios, injects faults, and analyzes distributed-system behavior to strengthen resilience testing.
- Designed MCP-based CI/CD agents adopted across the team for context-aware code review, automated security assessment, and test generation, reducing repetitive manual review work.
- Built RAG pipelines used across the organization to ground developer-facing LLM tools in internal documentation, with evaluation and observability workflows that improve response reliability.
- Mentored an apprentice engineer through architecture walkthroughs, code and design reviews, and production releases, accelerating onboarding to API delivery and operational standards.

Visa | Austin, TX

Software/Data Engineering Intern (May 2022 - August 2022)

- Built a Commercial Insights dashboard and Java/Spring Boot data services integrating DB2, HDFS, and Hive.
- Served real-time metrics to a React dashboard via REST APIs for executive and client-facing decisions.

PROJECTS

AgentGuard: Production Evals & Observability for AI Agents

- Built an AI-agent evaluation platform for simulated payment workflows, exposing Spring Boot APIs as MCP tools across refund, dispute, account-creation, and failure-recovery scenarios.
- Implemented deterministic checks, LLM-as-judge rubrics, OpenTelemetry traces, replayable failures, PII redaction, policy controls, audit logs, and human-in-the-loop approvals.

AI Wedding Planning Application

- Built an iOS-first platform with Expo React Native and a Next.js/tRPC API, combining deterministic vendor filters with LLM structured-output ranking and fallback scoring.
- Implemented editable AI outreach drafts, Resend email delivery, inbound webhook routing, persistent message threads, and latency/token telemetry.

Blockchain Identity Management for Vehicular Ad Hoc Networks

- Built a Hyperledger Fabric identity system and smart contracts for vehicle registration, revocation, encrypted communication, and tamper-resistant audit trails in VANETs.

SKILLS & TECHNOLOGIES

Languages: Java, Python, JavaScript, TypeScript, SQL

Backend & Data: Spring Boot, REST APIs, FastAPI, React, Next.js, tRPC, Hibernate, PostgreSQL, DB2, Kafka

Cloud & Delivery: AWS, Docker, GitHub Actions, CI/CD

AI & Observability: LangGraph, Claude API, MCP, RAG, LLM evaluation, OpenTelemetry
